Introduction to RILEM

Dr Daniela Ciancio,
RILEM Implementation Manager

*The International Union of Laboratories and Experts in Construction Materials, Systems and Structures, RILEM from the name in French (**R**éunion **I**nternationale des **L**aboratoires et **E**xperts des **M**atériaux, systèmes de construction et ouvrages), is a non-profit association with the mission of advancing scientific knowledge related to construction materials, systems and structures and encouraging transfer and application of this knowledge world-wide. This mission is achieved through collaboration of leading experts in construction practice and science, including academics, researchers, testing laboratories and authorities. This seminar will present the main features of the association that include, but are not limited to, publications (most of them available for free to everyone), courses and events, awards and most importantly the Technical Committees, the heart of RILEM's scientific activity.*

This presentation also aims to enhance the collaboration between RILEM and ICT members, after the international partnership agreement recently signed by both institutions.
